

## **BIM Intern**

**Ready to shape the future of urban infrastructure? Join us as an intern and get hands-on experience with the BIM/GIS technologies powering our next groundbreaking construction projects!**

At Metroselskabet, we have embarked on an ambitious digital transformation journey. We need to establish digital solutions that are as user-friendly and efficient as possible. These solutions are essential for our own internal work processes, our collaboration with external stakeholders, and the operation of the existing and future metro and the light rail.

### **The tasks of the BIM project will be:**

- Participate in the work of maturing the company's BIM competencies
- Contribute to the development of processes related to BIM
- Participation in further processing of the EIR / BIM Execution Plan and related documentation
- Assist BIM Manager / coordinator / modelling specialist with BIM model work and quality check
- Ad-hoc tasks associated with the construction projects

### **What we are looking for**

- A curious and engaged intern with a strong interest in BIM — not just as 3D modelling, but as a holistic approach to working digitally with structured information, collaboration, and data quality.
- Someone who is eager to learn, contribute to ongoing projects, and explore how digital methods can support better decision-making in construction and infrastructure.

### **About the team**

You will join the Information Management & Technologies team — a small, dedicated group working at the intersection of digital strategy, data governance, and infrastructure projects.

We collaborate closely with both internal departments and external partners to ensure structured, secure, and value-adding use of digital information across the project lifecycle.

### **What we offer**

From day one, you will experience a strong sense of community with peers to spar and share ideas with. On your first day, you will be assigned a tutor who will focus on your professional development and overall well-being throughout your internship. Our team is committed to supporting you in every way to ensure you have a meaningful and positive experience with us.

In addition, your internship will include various social events — everything from Friday bars and parties to shared Friday breakfasts with our CEO. We also have a great cafeteria and offer afternoon snacks every day.

You will also gain practical experience with BIM, Autodesk Construction Cloud and ISO19650.

### **Practical information**

We do not hire interns who have already graduated. This means you must be enrolled in your education and either be an active student or on a leave of absence from your studies.

We will be conducting interviews on an ongoing basis.

If the position sounds like a good fit for you, please send us your application.

We look forward to hearing from you!
